SLOTS DIAMOND

An immersive platform to attract and engage casino game lovers from across the globe.

THE IDEA

As Casino games are gaining popularity, we as a service provider are highly devoted towards delivering trending solutions for the gambling lovers across the globe. Currently we are working with one of our foreign clients who focuses on attracting casino game players worldwide to meet their aspirations conveniently. Initially he consulted us with a B2C concept where there would be a single platform containing diverse games and he would be targeting players across the globe to come and play via his platform.

But later on he decided to shift a bit towards a B2B model where he would be having his own platform containing varied casino games but will approach clients who have a strong base of existing players. His main purpose here is to attract maximum clients to enable increasing number of players use his platform for playing.

OVERVIEW

former helps in updating the database along with

Seamless wallet transfer API and Balance

transfer API are the two main features that can

determine the success of this project. While the

latter facilitates in doing the same but once the session ends. For Balance wallet transfer the gameplay remains smooth & can deliver a better

the transactions during the gaming sessions, the

transfer the scope of data mismatch is reduced as it gets updated simultaneously during the playing session.
